# Jump Squat King by ZiedYT

A program that serves as a "mod" for the game jumpking, that uses your cam inorder to play the game

How To Use It

- Go to main/JumpSquatKing.exe and run it as administrator
- Use the drop down menu to select your camera. You may have to wait if you choose a camera with high resolution.

-
- Moving left and right:
  - Use your position (the red point in the tracker). You can change the location required for the character to move using the left/right line spinboxes.
  - or use you arm angles. You move to the direction of the raised arm. You can change the angle treshold. (You have to be facing the camera)
- Jumping:
  - Squat so that the center (red point) is under the line for the spacebar to be pressed. You can change the line position.

- Turn to the direction you want to jump to. The rotation treshold can be changed using the body rotation spinbox.
- Standup so that the center is above the line for the spacebar to be released.

- You can flip and rotate the image and show the lines used for the tracking.
- Reduced the quality using the spinbox if you encounter lag.
- When all your settings are ready, open jumpking, click start tracker inorder to start using the program.
- (dont forget to click on the game)
- Also shout me out if you can, this makes me motivated to make open source stuff for everyone to use.
- If you encounter any bugs feel feel to message me on twitter.
- If you are interested in the code, it's in the first folder.
